

Team Attempts to Identify Outstanding Firewall Tasks

On **Friday, December 16, 2016**, CFISD, Layer 3, and M&S conducted a meeting to identify the remaining tasks that need to be scheduled. The teams divided the tasks into following three areas:

I. 4 Internet Firewalls –

- 2 - Internet Firewalls at Data Center 3
- 2 – Internet Firewall at Data Center 4

The discussion began with the internet firewalls. Unfortunately, the majority of confusion resides in this area. The teams determined that we need to have Presidio join the conversation before we schedule any activity. We need to be careful and not confuse internet traffic with data center traffic, what's active/active, what is pinned, etc.

II. 4 Data Center Firewalls –

- 2 – Data Center Firewalls at Data Center 3
- 2 – Data Center Firewall at Data Center 4

We need to determine our plan for rolling out these firewall policies. What is the best way to approach this deployment?

III. 3 BYOT Firewalls –

All at Data Center 4. Fewer questions pertaining to this set of firewalls.

With so many outstanding questions, the plan is to reconvene in early January with Presidio, Layer3, M&S, and CFISD.
