

Goal 2

DMZ Migration

Lance Melancon and Andrew Tran

The process of migrating our DMZ to the new IP space is nearing completion. ECN and NMO have been working together along with the assistance of M&S Technologies to coordinate these efforts. After each migration, **Lance Melancon** and **Andrew Tran** worked with application owners and vendors to ensure all services were fully functional.

The current timeline of completing the transition to the new IP space is **8/3/16**. At that time, there will be a final move to the new firewall, configured for high availability, and verification once again that all servers and services are operating as expected.
