

DEVICE IMAGING AND INTEGRATION

DII MBAM Meeting

Larry Barrios, Jennifer Miller and Derly Buentello met to plan delivery of BitLocker encryption on district laptops that store sensitive data. BitLocker software will natively encrypt the information on a Microsoft Windows computer so that unauthorized users, apps, or utilities are not able to access information while data is at rest. In addition, Cypress-Fairbanks ISD Technology Services will use Microsoft Administration and Monitoring (MBAM) to centrally backup BitLocker Recovery Keys and provide machine reporting. We are working together to define minimum requirements, policies for removable media and staff that will require their sensitive data to be encrypted.

Derly, Larry, and Jennifer
