

DEVICE IMAGING AND INTEGRATION MBAM BitLocker Meeting

John, Derly, Larry, and Jennifer

Larry Barrios, Jennifer Miller, John Crumbley, and Derly Buentello continue meeting and planning delivery of BitLocker encryption on district laptops that store sensitive data. They established the policy for types of devices and media that need data encrypted, when encryption must be used, and the minimum requirements for hardware and software used for encryption. They also started developing policy for sensitive data components that can be categorized as CFISD Protected data, CFISD Sensitive data, CFISD Public data, and the actions needed to safely secure this data. Additionally, using MBAM, John and Jennifer activated BitLocker encryption on their district laptops. This serves to demonstrate the customer encryption experience and secure the sensitive data on their laptops.
