

Enterprise Communications Network Network Highlights

Oscar Villar completed internal DNS configurations for Cy Park High School's web site and submitted a request (including configurations) to Big City to complete external DNS configurations.

Oscar Villar, **Larry Barrios**, and **Greg Rhodes** worked on slowness with Google Chrome browser on our network. While working with Google, **Larry** and **Greg** discovered that Chrome is making calls to Hong Kong. **Oscar** blocks traffic to/from Hong Kong, due to the large number of network attacks that originate in Hong Kong.

Oscar Villar

Oscar Villar worked with BlueCat Support on three separate occasions this week:

- DDNS not updating.
- Recursive DNS server crash 10.4.250.43. Possible future hard drive failure.
- Rather than just restarting a service, Oscar asked BlueCat Support to help identify the root cause of the issue where we are not able to deploy to the Master-DNS server.

Elizabeth Montes provided support for a local computer contest to be held this week. Cy Woods HS is hosting the CAD/Computer contest this year in the Exhibit center and they requested 30 network drops, as well as Wireless Access. **Elizabeth** installed a 48 switch port to provide the hardwire network connectivity and **Anna Senties** set up the wireless network connectivity for the contest.

Enterprise Communications Network Network Highlights

Anna Senties and **Elizabeth Montes** worked on an Aruba Access point (AP) located in the science area of Cy Woods HS. They were trying to identify if the problem is a cable issue or an AP issue.

A process for troubleshooting production Aruba APs was implemented last week. **Anna Senties** will be the point person from CFISD to open a service request with Layer3 Communications should we experience issues with Aruba APs

Thomas Hollister worked on a fiber issue at Anthony MS. Fieldhouse fiber's 3,4 are unusable due to physical damage. DivisionOne is investigating if replacement can be covered under warranty.

Thomas Hollister is working with Mike Mallette from the Berry Center, David Deitch from Presidio and Rick Martinez from MCA Communications to ready a quote for upgrading / standardizing the stadium ticket booths. This includes fiber home-runs back to MDF.

Roland Padilla

Charles Newton

Roland Padilla organized the surplus network equipment at DataCenter 3. Cxtec has picked up the equipment and will evaluate the older hardware. Once the equipment is tested and validated, Cxtec will issue CFISD a check for payment of the hardware.

Roland Padilla managed to make room in DataCenter 3 for the arrival of the remainder of campus switching gear. Presidio will coordinate with Roland on delivering the balance of equipment.
