

Enterprise Communications Network Network Highlights

After basic troubleshooting techniques have been exercised, **Anna Senties** is the CFISD point of contact for all production Aruba wireless issues. **Anna** and **Tony Rogers** worked with Henry Deleon of Layer3 Communications to address two unique wireless issues at Cy Ridge HS and Truitt MS. It is likely that both complaints are the result of construction material found in the campus walls that is hindering the wireless signal.

Thomas Hollister worked to resolve a variety of outstanding issues at Woodard ES:

- Printing woes are over and all printers are working properly after Bluecat corrections
- Working on warranty repairs for two wireless access points (APs) data drops in the gymnasium. Warranty construction covered the cost of a lift and check the drops.
 1. One AP had resolved at 100mb had a kink, straightening out and smoothing of cable allowed the AP to negotiate a 1gig connection
 2. The other AP never had link due to a damaged jack

Enterprise Communications Network Network Highlights

Oscar Villar

Oscar Villar worked to re-IP Frazier Elementary's WattStopper after the network upgrade. The unit did not come back online and the hardware was ultimately replaced.

Andrew Tran

Oscar Villar requested a count of athletic field houses from each quadrant leader. Currently only two campuses (Salyards and Anthony) have wired field houses. All future high school and middle school field houses are expected to be wired into the campus networks. A final determination will be made as to whether we retrofit all existing field houses with network connectivity.

Roland Padilla

Elizabeth Montes worked with MCA Communications at Arnold MS to relocate cables that are in the second rack and that run across to the first rack in the IDF-C closet.

Charles Newton

Elizabeth Montes is working with Juan Cruz of the police department in an attempt to make room in the MDF to install the new UPS. Juan is going a move his server to the IDF B but there is not much space in the MDF for future grow. **Elizabeth** is contemplating the addition of a new closet.

Glen Carpenter

Enterprise Communications Network Network Highlights

Thomas Hollister received complaints from Security regarding M.Robinson security video footage that visibly went from choppy to non-viewable from offsite. The optic strength was outside of acceptable readings. Phonoscope fibers were bent beyond an acceptable bend radius inside of their tray. **Thomas** straightened the fibers with success and Security is now able to view quality video.

Roland Padilla received one pallet of campus network hardware from Presidio. The massive undertaking of managing the inbound equipment for campus upgrades should be nearing completion as we enter the final stretch of campus upgrades.

Glen Carpenter assisted the ECN team with outages at Francone ES, Fiest ES and Reed ES.
