

Enterprise Communications Network Operational Activity

On Wednesday, October 21, 2015 members of the Klein ISD Technology Team visited with **Oscar Villar, Greg Rhodes, Larry Barrios,** and **Paula Ross** to learn more about the projects our department is currently working. Klein ISD was specifically interested in our co-location strategy with CyrusOne.

Oscar Villar continues to investigate mitigation strategies in an attempt to reduce the daily DDoS attacks on CFISD. **Oscar** has begun to reach out to vendors that offer appliances that can reduce or eliminate the distributed denial of service attacks.

North Side of Highway 290 -

Elizabeth Montes visited the following campuses to address iSupport Request(s) - Matzke, Science Resource Center, Bang, Arnold

HVAC Envirosensors – **Elizabeth Montes** worked with Brandon Stagg from Climatec reserving IP addresses for the envirosensors recently installed at Yeager Elementary. In addition, Elizabeth worked with Climatec to resolve the username/password issues preventing access to the envirosensors. An update was provided to both Delroy Sieze and David Tooker from the CFISD HVAC department.

Telge Barn – **Elizabeth Montes** configured another switch for Telge Barn. MCA Communications mounted the switch last Friday and is operational.

Elementary Wireless – **Elizabeth Montes** is working with MCA Communications to verify ports and configure Cisco AP's for Elementary schools with reported wireless issues.

North Side of Highway 290 -

Anna Senties visited the following campuses to address iSupport Request(s) – Campbell, Matzke, Willbern, Bang

Willbern - Several Cisco APs were reported down. **Anna Senties** replaced the power supply and blade on the switch and still could not bring the APs online. **Anna** then referred the service request to MCA for further testing since the APs in question are located in the ceiling.

Anthony and Woodard – **Anna Senties** continues to troubleshoot Wifi connection issues reported at these two campuses. Recently, Layer3 Communications completed the installation of the additional APs at Woodard, completed the Aruba controller upgrade, and placed the APs at these two campuses in the correct wireless AP group. Now that these three steps are complete, more testing needs to occur. The testing will be a joint effort between the ECN and DII teams.

Telecommunications Support -

Roland Padilla provided Presidio with specific configuration information for Berry Center Cisco VoIP. Presidio used this information as a reference to ensure that phone service would be restored after the planned network infrastructure upgrade. All phone services were back online by late Monday afternoon, October 19, 2015

Roland Padilla participated in a follow-up call with DataVox in support of the Human Resources video conferencing solution. DataVox is gathering technical information from CFISD team members.
