

Building High Performance Optical Network with LEARN: Lonestar Education and Research Network

Frankie Jackson met with surrounding district's Chief Technology Officers on August 16, 2016, to discuss the new Texas LEARN initiative. Polly led the meeting discussion.

The LEARN organization is working towards building a state wide network that would reach across the state and provide high speed connectivity for rural school districts.

This meeting was intended to discuss how LEARN could benefit larger districts in the Houston area.

The graphic on the right was a starting point for discussions. A future meeting with the CEO of LEARN is being planned.
