

New Employee Whereabouts Software Almost Ready

Rich Crishock is developing a new software application called Employee Whereabouts. It's a software that provides the ability to track staff when out of the office. The software will increase communication so that all staff's whereabouts will be known and available in one central web-based system. It will also increase efficiency by having visibility about where staff is located across the district when onsite campus coverage is needed. Rich demonstrated the software to Frankie Jackson, Paula Ross, Eric May, and John Crumbley on Monday, **February 26, 2018**. The software is almost ready to use. The software will first be tested by the Network Infrastructure and Communication (NIC) team. Thank you Rich!
