

Pickup and Delivery of Equipment: A Critical Component for the Success of the Bond

Frankie Jackson spent the morning with Mike Grimes on **June 15, 2017** as he picked up and delivered technology equipment at Arnold middle school, CyRanch high school, and Pope elementary school. More pictures are on the next slide.

Most of the equipment were instructional technology items that aged between five and ten years old. Equipment ranged from old monitors, printers and desktops. Mike was very kind to explain to Frankie all of the details of the job. The work is tedious. It requires riding around in a big, noisy, hot truck. Once we arrived at the schools, it required unloading the forklift, propping up doors, wrapping up the equipment with plastic so the equipment is stable to move, loading the equipment into the truck, loading up forklift, and taking everything back to the service center. It is a critical step in the overall process of a large technology upgrade. Mike does a FANTSTIC job. **Thank you Mike!**
