

Technology Service Center Increases Efficiency Through Automation and Organization

Frankie visited the Technology Service Center on **June 15, 2017**. Frank Adian gave her a tour of the facility. He was quick to show off how efficient his organization had become as the department is supported the 2014 Bond Technology Infrastructure upgrade.

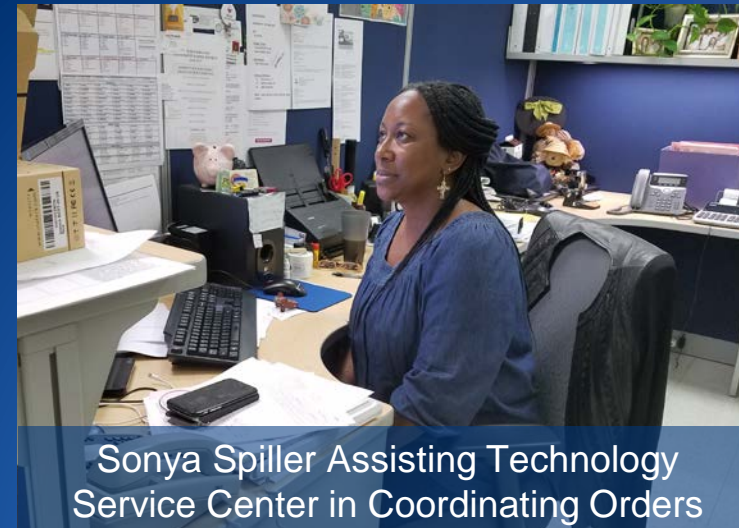

It was impressive how he removed the older work benches. With equipment now smaller with extended warranties, there isn't the need to have so much space for repair. With the LANDesk Enterprise Desktop system, he's now able to monitor technician's work as they image desktops and laptops. He had all equipment neatly organized, ready to be delivered and installed at the new campuses. It was impressive. Thank you Frank!
