

All Wireless Campus Design

Frankie Jackson and Paula Ross met on Dave Kapavik (Layer3 Communications) and Richard Heffelfinger (Aruba HPE) on **May 31, 2018** to discuss the requirements and network infrastructure needs to support an all wireless campus, including the integration of building automation systems, video cameras, and safety / security systems. With new campuses in the queue to be designed and built, the timing is right to start considering new designs that support newer technologies.

This conversation started when the teams met at the HPE center on April 12, 2018 in a [Customer Engagement meeting](#), where we discussed targeting a new construction site to see if it could be designed as an “all wireless” campus.

Dave and Richard took an action to explore options starting with an assessment of preliminary campus design plans.
