

Aruba's Chief Technology Officer and Hewlett Packard Enterprise Senior Chief Technologist Visit

On Tuesday, **November 8, 2016**, Aruba's Chief Technology Officer (CTO), Partha Narasimhan and Mark Pearson, Hewlett Packard Enterprise's (HPE) Sr. Director and Chief Technologist visited with Jack Martin, Rick Baxter with Aruba, along with Craig Wall and Dave Kapavik with Layer3.

Frankie Jackson and Stuart Snow, including staff from the Enterprise Communications Network (ECN) team, enjoyed the opportunity to learn about Aruba and HPE's upcoming plans, as well as hearing about Aruba's vision of the future and how Aruba is involved. We then had the opportunity to ask question about Aruba and the wireless network landscape in the future.

Partha Narasimhan, Aruba Chief Technology Officer

The most exciting part of the conversation was discussing how new wireless technologies can improve student learning. We discussed developing a future technology that merges wireless network data with student rosters and other pertinent information about the student to improve the student's learning experience. We also discussed opportunities to bring home connectivity to the home of students in low income areas.
