

LANDesk Replacement for Novell Zenworks is Underway at the Elementary Schools

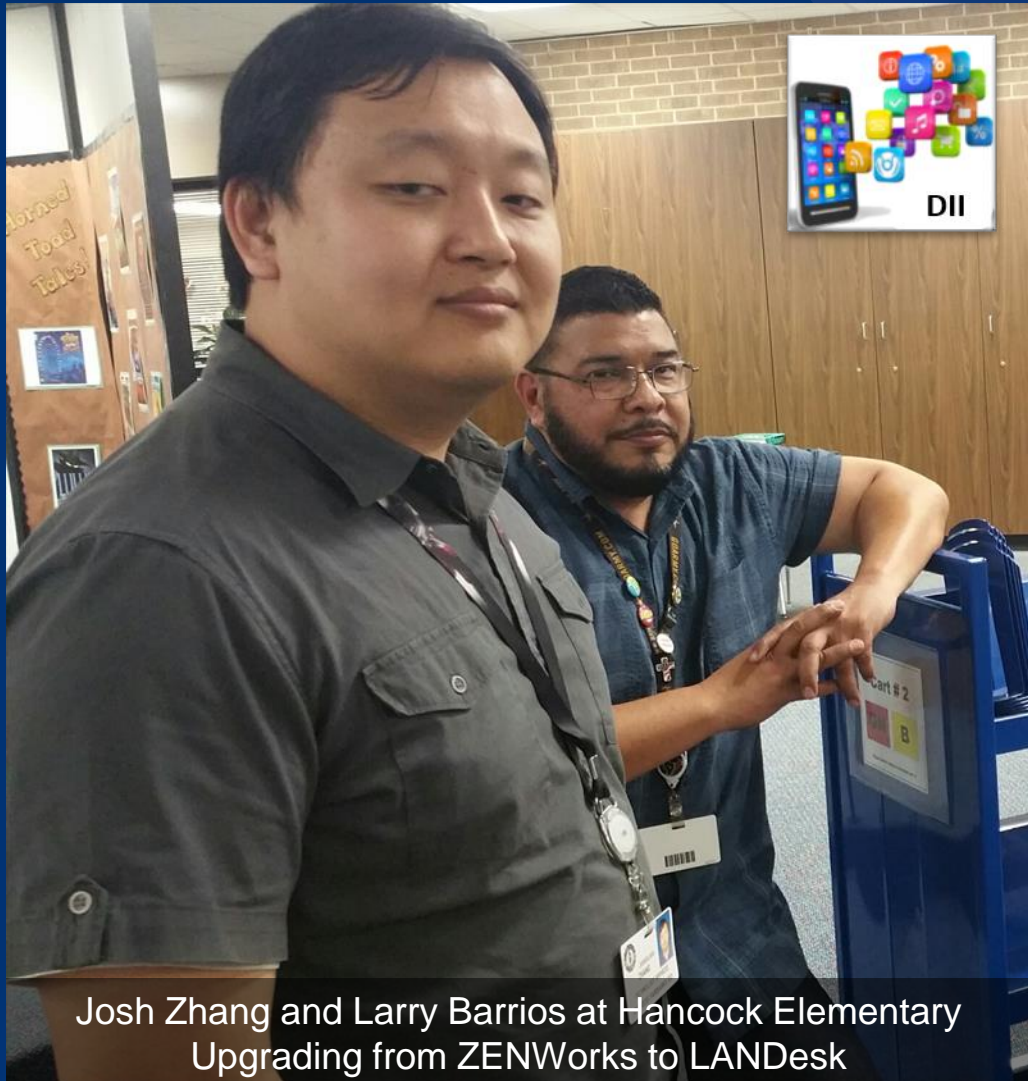

Larry Barrios' Device Imaging and Integration (DII) team is working feverishly to replace Novell ZenWorks with the LANDesk desktop management enterprise software.

Larry is working to prepare a comprehensive schedule that includes scheduled dates for all tasks, including package (image) building, and updates for the remaining elementary schools, secondary schools, and service centers.

Frankie visited Josh Zhang and Larry at Hancock elementary school to observe how the conversion is going. The transition to LANDesk must be complete by July 31, 2016. We are not budgeted in the 2016-2017 for ZenWorks annual support. Additionally, we have notified Novell that we would not be renewing our annual contract.
