

# LANDesk Software Conversion at Goodson Middle School

Frankie Jackson visited Goodson Middle School on Thursday, **June 30, 2016** to observe the LANDesk software converters from the Device Imaging and Integration (DII) team with Prime service technicians. Michelle Campos is leading the middle school conversion effort. The conversion requires two passes: one for desktops and one for laptops. All desktops had been previously converted at Goodson middle school so when Michelle's team arrived, their task was to convert the carts with 281 laptops. The team was in great spirits, as shown in the following picture. The team is impressive, as the process is now streamlined and efficient.

Check out this [youtube](#) video to see the team working through the process. Great job team!
