

LANdesk Software Conversion at Wilson Elementary School

Frankie Jackson visited Anthony Melton on Tuesday, [July 12, 2016](#), at Wilson middle school. Anthony is leading the elementary school LANdesk software conversion, with a team of service technicians that is moving through the school quickly as he has fine-tuned the upgrade process. Wilson middle school is conducting summer school, which makes the upgrade more challenging. The team's focus is to put the students first and the upgrade second.

Anthony worked with the summer school principal to map out the school and prioritize the upgrades in the area of the building that would least impact teachers and students. Anthony and his team even worked late in the evening so they would not interrupt students. It's staff like Anthony that helps our department achieve excellent custom satisfaction ratings. Thank you Anthony!
