

Langham Creek High School Renovations

Final Push for Cabling and Wireless Access Installations with Strategic Partners MCA Communications and Layer3

As the first day of the 2018-2019 school year approaches on Monday, August 27th, Cypress-Fairbanks staff is making a final push to reconnect the Wireless Access Points (WAPs) throughout the school. Strategic partners, Layer3 Communications and MCA Communications, are working with the CFISD team, to get the tedious task done. Many CAT6A wireless were cut by the construction team. This triples the amount of time it takes to get the WAPs hung. Without a wireless signal which only happens with a cable that is connected back to the switch, the WAP can't be tested. Plus, the cable must be re-run up through the ceilings. Some of the ceilings are high. Thank goodness for our strategic partners, Layer3 and MCA. Thank you for all that you do for the CFISD team!
