

Initial Design Strategy for Middle School #19

Frankie participated in the initial design strategy meeting for middle school #19. This school will be located next to Bridgeland high school in 2019. The primary topic of conversation was with the network closets and the number of cabling drops needed for wireless access. Frankie took an action to consult with Layer3, our wireless service provider. It was determined that one category 6a cable would be needed for each wireless access point.
