

# Meeting with Catapult to Engage in Contracted Services for Microsoft's Active Directory and Domain Services

With the resignation of Josh Zhang in the Network Management Operations (NMO) team, staff augmentation is needed to “bridge the gap” until his position can be backfilled. Frankie Jackson, Paula Ross and Greg Rhodes met with representatives from [Catapult](#) on Friday, [April 13, 2018](#). We have worked with Catapult Systems in the past. They helped with the Novell Groupwise to Microsoft O365 conversion.

Greg Rhodes has met with their representatives and members of their engineering team. With Catapult's knowledge and experience, we believe they can come in and continue with the Microsoft Active Directory implementation once Josh leaves on April 20, 2018. The proposed activities in their scope include are shown on the right. Currently the team is assessing the scope of work and working to get approvals so Catapult Can begin work.

The Microsoft Active Directory upgrade will need to be placed on hold once Josh leaves if we cannot backfill his position and bring Catapult in to augment staffing on our team.

- Management of Active Directory
- Management of Domain Network Services
- Management of Dynamic Host Configuration Protocol (DHCP)
- Management of Group Policy
- Management of servers
- Active Directory diagrams and associated documentation
- Design and Implementation assistance for:
  - Windows Server
  - Implement Group Policies
  - Domain Network Services
