

CypherSecurity eLock360 Product Enhancements Requested

Frankie Jackson met with Kelli Hanson, a representative from CypherSecurity, on **April 13, 2018** to discuss their eLock360 data protection software. The district's cybersecurity services team evaluated eLock360 and compared the capabilities to other available cybersecurity products. In March, the CyFair team recommended to work with CypherSecurity to help enhance the eLock360 product. We asked to continue using the product at no charge for the next 12 months and during this time, work with their company to build out the product for the K-12 market.

During the meeting, Frankie delivered a list of 8 new enhancements that the CyberSecurity services team had prepared. Kelli sent our desired enhancements to their technical team to setup a meeting to discuss the improvements and establish a timeline for completion. This is great news!

8 New Enhancements Requested for eLock360
