

Google Chief Information Officer (CIO) Roundtable Webinar

Frankie Jackson participated in Google's Chief Information Officer (CIO) roundtable webinar on Friday, **June 2, 2017**. The purpose of the roundtable is for Google to share product offerings. The following are some of the highlights:

- Google Virtual Reality with [DayDream](#)
- Google [JamBoard](#)
- Google [Lens](#)

Google's new offerings are impressive!

Platform	OS	Security
Virtual Reality Daydream will soon also support a new category of VR devices, which we call standalone VR headsets. These devices build on what's already great about smartphone VR, and they make the whole experience even easier and more comfortable. Standalone headsets don't require a phone or PC. Instead, getting into VR is as simple as putting the thing on. The hardware is fully optimized for VR, and features a new headset tracking technology called WorldSense. WorldSense enables positional tracking, meaning the headset tracks your precise movements in space – and it does this all without any external sensors to install.		
 Introducing WorldSense: Move natu... Google		

Google Lens is a behind-the-scenes piece of software that can recognize text and objects from a picture or camera. It analyzes and contextualizes what it sees in real time and shares that info quickly.
