

Automating Electronic Forms with Laserfische in Human Resources

Frankie Jackson participated in a meeting on October 25, 2016 with John Crumbley and Eric May, including Chairita Franklin's Human Resources staff, to discuss automating electronic forms using Laserfische. Laserfische software helps organization be more efficient by streaming and automating repetitive manual processes. The first process that the team is proposing is to automate the contract signing of all the paperwork. Eric May demonstrated a draft work flow that he had automated. The team reviewed it and it gave them ideas about how to proceed.

Chairita asked for an overall implementation project plan. Another meeting is scheduled with John's team to discuss next steps. HR staff is excited to see the possibilities of how their jobs can be automated.

Eric May, Chairita Franklin, and John Crumbly with Human Resources Staff
