

Coordination with Facilities and Construction Purchasing Technology for New Construction

On July 12, 2017, Frankie Jackson and Mike Raspet, met with Facilities and Construction, Jason Baezner, and Dillon Brady to discuss increasing coordination during the construction process. Paula Ross prior to the meeting, had presented several options for purchasing technology equipment during the construction phase. The team agreed to move forward with Owner (Technology) Furnished Owner Installed model. The team also defined the types of equipment that Technology Services would be responsible for versus the Contractor. This can be used as our guideline for clarification. This guideline will be used in all future construction efforts.

Mike Raspet, Dillon Brady, and Jason Baezner
Discussing Purchasing Technology for New Construction

Technology Services:

- Network electronics
