

Meeting with ViVi, a New Cross Platform Wireless Screen Projection Solution

On **October 25, 2017**, Frankie Jackson met with representatives from ViVi, a new company that provides a new cross platform wireless screen projection solution. ViVi's screen mirroring technology transforms the classroom into an interactive, collaborative learning space for both teacher and student. A proof of concept will be considered in the spring of 2018.

Robert Swaab (ViVi) with Larry Barrios and Austen Chang

TEACHERS

Teachers are able to freely move around their classroom, keeping students engaged by paying attention to their specific needs whilst still remaining in control of the screen.

STUDENTS

It's easy to become active participants rather than passengers. Students are able to share their screen (with teacher permission), creating the opportunity for immediate teacher-peer feedback, boosting confidence.

IT/AV

Easy to set-up and install, monitored and managed centrally through ViVi's Admin portal. ViVi is a BYOD platform, allowing any device or operating system to connect to the display directly through the school network.
