

Making Room for Storage

Michael Raspet, Mike Diaz, and Kenneth Gibson are pictured moving data center cabinets to the loading dock to make room in Data Center 3 for the new EMC XTremIO and VPLEX cabinets.

These three cabinets from Data Center 3 along with three cabinets from Data Center 4 were moved to Bleyl MS for future use.

Pallets and boxes from the new gear were returned to EMC for recycling.

Cisco APIC-EM

Mike Diaz collaborated with ECN and **David Deitsch** of Presidio to install and configure a new Cisco deployment appliance, APIC-EM.

The Cisco appliance is a VM server and is installed on to the Network Management Pod located at Data Center 4.

The Cisco appliance assists ECN with installing or upgrading the IOS software on all Cisco switches located across the district through a single interface.

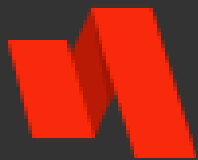

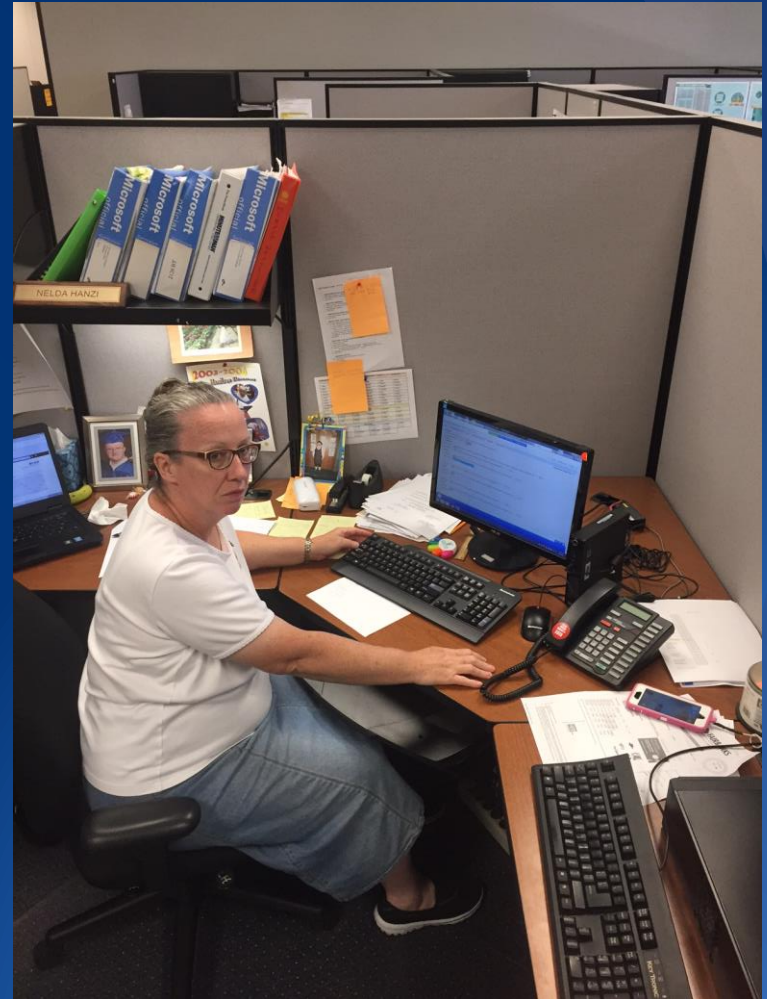

Updates to email Accounts

Nelda Hanzi used Rapid Connect of the Identity Automation suite to process email name changes. Name changes in Active Directory are handled automatically through HR but email accounts must be updated manually.

Users were contacted by phone and email to notify them of the changes to their accounts and to provide instructions on how to apply changes to all devices.
