

CFISD Building Alert System

Recently NMO received a request from **Krystal Ford**, Project Manager for Facilities and Construction, to assist with a building alert system, Telecenter U, for each campus in the district.

Telecenter U enables emergency notifications for lockdown, lockout, and evacuation.

Mike Diaz is currently reviewing the requirements and specifications for the system.

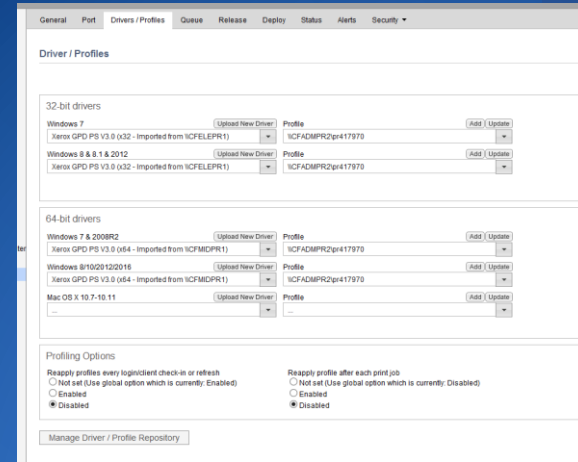

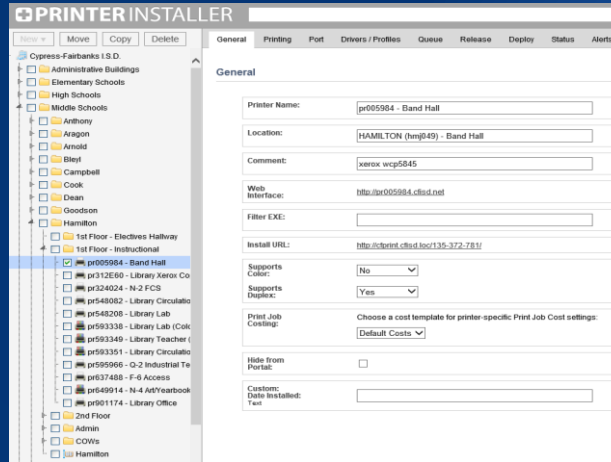

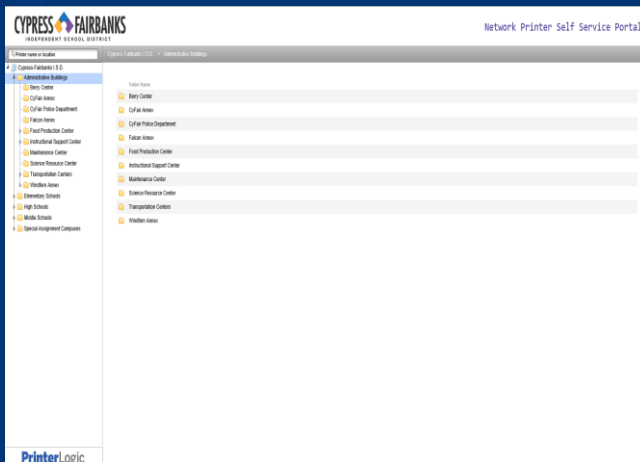

New and Improved Printing

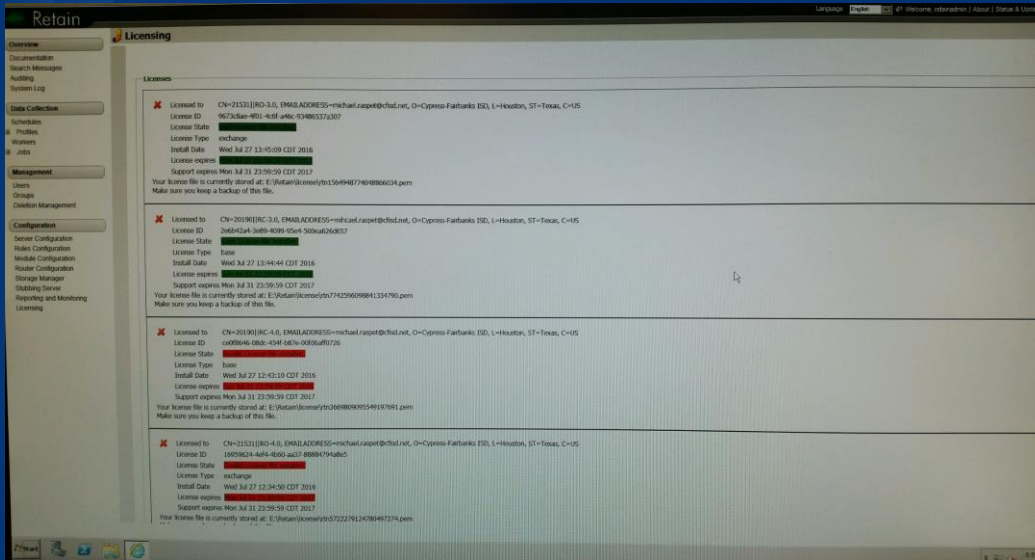

PrinterLogic

Working with the most current technician list from **Doug Baker** of Repair, **Kenneth Gibson** created Printer Logic user accounts for all the technology service technicians. These accounts give the technicians access and control over the printers for the campuses they support. With the new printing system in place, training will begin for the technicians while the previous Microsoft print servers will be shutdown.

Retain eMail Archive

Licensing was renewed this week for the Retain archive from GWAVA. The email archive contains every email from our mailboxes for the past six years. Past email from Novell GroupWise and current email from O365 are archived on a nightly basis.

Michael Raspet removed the last SUSE Linux server from our environment. This server, which was used for archiving our O365 email, was replaced by a Windows 2012 R2 server for the same task.
