

EMC Isilon implementation

Mike Diaz, Ken Gibson and Presidio installed and configured the EMC Isilon storage.

Replication of data between Data Center 4 and Data Center 3 has successfully been tested for the Isilon storage, providing disaster recovery for the future student and teacher home drives.

Mike Diaz and Presidio also continued the installation of the EMC Xtreme IO and VPLEX.

Data Center 3 Cable Update

Electricians from Melton Electric were onsite **Friday, August 19th**, at DataCenter3 to install an additional two post rack with integrated vertical cable management.

In addition, they installed both vertical and horizontal cable management on the existing two post racks located in the datacenter.

This weekend, the electricians will address the legacy cabling, reorganize, label, and document where possible.
