

Supporting Improvement & Accountability

The Office of School Improvement and Accountability issued a request to determine who had access to the Campus Improvement folders on the Global Drive.

Nelda Hanzi is compiling the data and creating a spreadsheet listing the personnel from all 88 campus principal group memberships.

Content Filtering: Google and Wikipedia

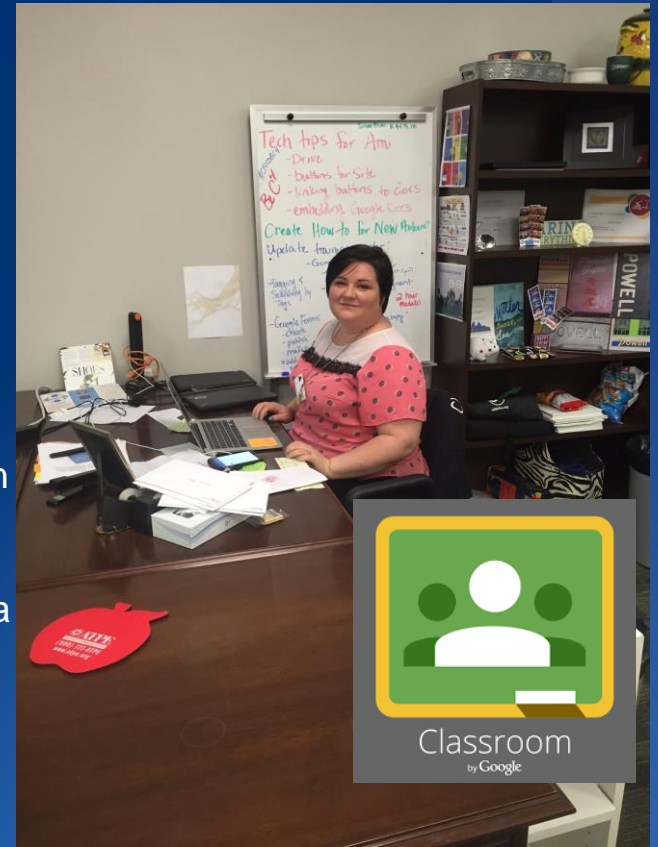

Greg Rhodes met with **Becky Cook** and **Jessica Powell** of Instructional Technology to address a couple of content filter issues.

Greg and **Jessica** worked together to create a solution for playing videos in Google Classroom.

Greg spoke to **Becky** about why Wikipedia should remain blocked for students.

Greg is preparing the agenda for the first Internet Content Management and Filtering Governance Committee meeting of the school year where Wikipedia and YouTube will be further discussed.

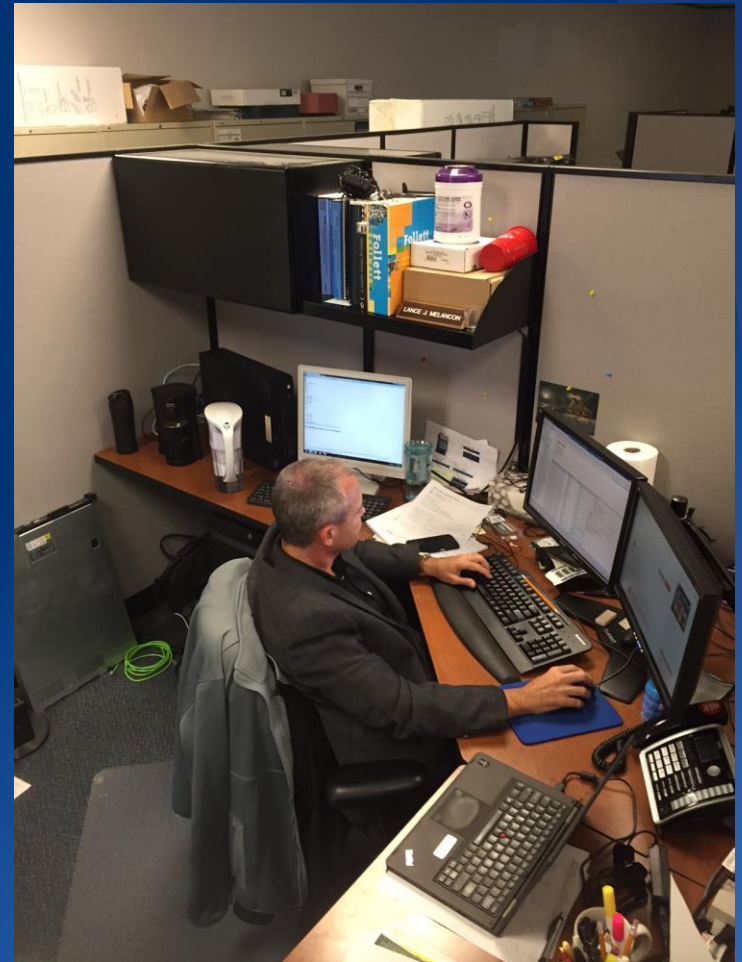

Kaspersky Issues

This week we had a disruption of service with the district file shares. Lance Melancon was able to determine that the problem was with the Kaspersky Antivirus Security Center falsely identifying multiple file accesses as a Network attack. This triggered a denial of service, and consequently the file servers became unavailable to process requests. Lance was able to restore access through a work-around but will be working with Kaspersky support for a long term solution.

Kaspersky is the district Antivirus program for servers as well as district devices.

Voicemail and Email Unite

With the implementation of the Cisco Unity System, **Kimberly Osborn** has started the integration into O365 for the deliverance of individual voicemails to their respective mailboxes.

The Unified Management Connection was created in O365, and testing of accessibility is currently underway.
