

Transfinder Issues

Nelda Hanzi and **Anthony Melton** worked with the Transfinder staff to resolve an access issue for Transportation. Users have traditionally gained access to the program through the mapped M: drive. Several methods of server access were discussed but we felt the best and most secure method at this time is a UNC path. Testing will be done on a small group of computers then deployed to all Transfinder users.

Security Video Camera Project

Mike Diaz, Ken Gibson, and Greg Rhodes met with Juan Cruz of the CyFair Police Dept., John Knight of EMC, and Carlos Garcia of Presidio to discuss the new Security Video camera project and the role of EMC storage.

From the discussions, it was determined that the new EMC Isilon storage will be used as backup to the video camera local storage and that it should be kept separate for the most part from the rest of the District data.
