

Network Access Every Day

Oscar Villar worked tirelessly on November 5, 2015 to ensure that several priorities were met for both CFISD's production network and CFISD's bond related network buildout. The day began with the last day

of a three day vendor summit. The collaboration between vendors proved extremely beneficial and great strides were accomplished with regard to Datacenter 4 network interconnectivity. Late that afternoon while many employees were preparing to head home for the day, **Oscar** managed the cutover of one of CFISD's internet connections to DataCenter 4. **Oscar** worked with ICTX to pull the existing Cogent internet connection, configure the internet connectivity between DataCenter 3 and DataCenter 4, then drove to DataCenter 4 to bring the internet connection online. Lastly, about 6:00pm that evening, **Oscar** began the last priority for the day, BlueCat DNS/DHCP network services upgrade. Pictured below with **Oscar** is the BlueCat engineer, Rich Goodson. As with many technology upgrades, the BlueCat upgrade encountered problems and the two worked into the wee hours of the morning to bring our production network back online.

Oscar Villar

BlueCat Network services provide users with IP addressing needed to obtain network access. Without an IP address, no one can access network resources. **Oscar Villar** worked until 3:30am **Friday morning, November 6, 2015** to ensure that **Every Student and Every Employee** could access the network, **Every Day**.
