

DII testing Desktop Solutions

DII team members **Larry Barrios**, **Josh Zhang** and **Lillie Swearingen** meet with Bang **Principal Erwann Wilson** and **Behavior Interventionist/Computer Liason Rodney Garcia**. They met to discuss rolling out Microsoft System Center (Desktop Management System) at Bang elementary. DII wanted to test some of the features of System Center so that they could compare program features against other desktop management systems. DII is in the process of testing desktop management systems to complete an RFP (Request For Proposal). The system they choose would replace the current Novell ZENWORKS system that is in place.

DII Testing Network Closets

Nancy Grella from DII continues to help testing of network closets. Once ECN and Presidio switch and upgrade the network gear at a campus, DII shows up to test the closet. Nancy, in this case, will test every switch in every closet. She runs a series of test to make sure the network gear is talking to our network servers and services. Nancy is shown above working and testing at the Berry Center.

DII In ACTION

DII is involved in many projects. They are part of the wireless and cabling project that is ongoing. Before a campus gets ready to have all newly deployed Access Points turn on, the campus has to be walked. The walk is important because it brings Presidio (group responsible for Network gear) MCA (company working on cabling), Layer3 (wireless vendor), ECN (district network connection team) and DII. They walk the buildings to ensure the building is ready to go live with its new wireless infrastructure.
