The beginning of school often brings cheers and smiles from the kids. Everyone in new clothes ready to start the new year. What you don't see or hear about is all of the work that happens in order to make the start of school possible. One of things that I wanted to tell you about is what was accomplished this weekend. In just 2 days, this past Friday and Saturday, DII worked with Service Center techs and Prime Systems to image over 1700 desktops at 11 campuses

DII team members Josh Zhang, Austen Chang, and Michelle Campos worked with Service Center Techs Chris Roberts, Steven Rodriguez, and Jose Mendez, as well as Prime Systems employees Johnny, Hector, Chris, Terry, David and John. All of these teams worked together to image new machines for the CATE (Career and Technical Education) classes. There were an average of 6 labs per campus, 11 different campuses and a total of 59.5 terabytes of data were moved across the network. This was possible by the use of satellite servers (temporary servers brought on site) which were used to accomplish this task.

A BIG THANK YOU goes out to these individuals !!!
