

Thank you Technology Services Staff!

Note of Appreciation from HVAC

“Thank you for providing great leadership and exceptional employees to serve our district.”

David Tooker

Received September 3rd from David Tooker, HVAC Supervisor, Maintenance Department:

“Mrs. Jackson,

I wanted to send a note of appreciation to you regarding the Technology Department. They provided technical support to the HVAC Department this summer for building automation controls server upgrades, V-Lan configurations, VPN access, computer support and two new control systems for our district. We had 562 new network thermostats installed in all the portable buildings. This required reserved IPs to be created and placed on spreadsheets for our controls contractor to install in a particular order. This support was provided by Oscar Villar and Elizabeth Montes. Without their support and patience, we would’ve had a difficult time providing a comfortable environment for the students and staff in all 281 portables. I know many nights were spent working well beyond the typical workday and late into the night on this assignment.

Oscar Villar – provided additional support by attending the project installation meetings with Climatec, coordinated the IT portion, and kept us updated on the district’s summer network upgrades.

Elizabeth Montes – provided field support with the upgrades and created the reserved IPs for the network thermostat project. She continued to update the spreadsheets and provided updates via e-mail on all activity.

Technology Leadership and Vision

Thank you Technology Services Staff!

Thomas Hollister – provided, as always, field support with the new network upgrades, located all of our switch ports, configured V-Lans and assisted with IP configurations on Langates and plants BCUs.

Michelle Campos – assisted us with new laptop and iPad setups, met at our office on multiple occasions for administrative rights for software upgrades, and she made herself available for phone support regarding multiple issues.

Lance Melancon – provided server support and created file access for the new network thermostat software. He was also instrumental in providing VPN access to our controls contractors for remote support and updates.

Michael Raspet – alerted me to the unsupported control system for our Siemens building automation. He was able to provide us with a server for the new hardware for control of Thornton Middle School. He also kept us updated on the NOC project.

I am certain some others have been overlooked from your Technology Department that provided support for our team. We may not know all their names, but we are thankful for the professionalism and courteous employees to serve our district.”

David Tooker, HVAC Supervisor, Maintenance Department
