

Wireless Needs for Westgreen Transportation Center

Goal 6

The Westgreen Transportation Center facility is almost complete and ready for operation. However, WiFi coverage in the shops is not complete due to the access point cable placements. **Ray Leung** and **Anna Senties** met up with **Terry Brunner** to walk the facility and begin to determine the necessary location for the access point cable drops. In addition to the cable moves, **Terry Brunner** mentioned the need for a dedicated data drop for the DPS Vehicle Inspection System. **Ray Leung** is working with **Richard Martinez** (MCA) to get the cables moved to the right location. Layer3 will come in after the cable move has taken place and mount the access points.
