

# Data Center Fabrics Successfully Merged

Joel McCotter

**Oscar Villar** and Joel McCotter from Layer 3 Communications spent another late Friday night at Data Center 4 on December 2, 2016. The pair successfully merged the old and new Brocade data center fabrics. The primary fabric now has 8 units, as well as the BYOT DMZ fabric with 4 units. A significant amount of time was spent working on the interface configurations, policies, and routes on the data center Fortinet firewalls. These configurations were migrated from the existing interfaces facing to the new interfaces. Several iterations of connectivity testing to a variety of resources in the new datacenter environment, as well as the existing data center environment, were performed.
