

Network Infrastructure Communication Adam Elementary Renovation

On Wednesday, August 9, 2017, **Elizabeth Montes** met Carlos Yopez, Project Manager for MCA, at Adam Elementary to verify the status of the network closets at the school. Carlos worked with Elizabeth to verify all three closets were online in anticipation of additional work scheduled later in the week. The installation of the wireless access points for the WIFI and the VoIP cutover are scheduled and are dependent upon network connectivity.

Also, on Wednesday August 9, 2017, **Elizabeth Montes** received a call from Steven Johnson (Project Manager Facilities) at Adam Elementary. Steven wanted to see if we could restore the WIFI in the new additional classrooms and also if we can get the phones ready for the Fire Inspection that was scheduled for August 11, 2017. Elizabeth installed two more switches in the new IDF C and also she restored the WIFI in the new classroom area. Benito Orihuela (MCA) helped **Elizabeth** rack the switches in the new rack and also to patch in the cables for the APs in the new classroom area.

In these pictures you see Richard Martinez, Francisco Gonzales, and Alfonso Herrera from MCA. They were working late on Wednesday evening, August 9, 2017, at Adam ES in order to get the school ready for network installation activities scheduled for the week.

Thank you **MCA** for your help!
