

# Elementary Switch Conversions Continue

## McFee, A.Robison, Holmsley and Moore

ECN team worked hard this week to upgrade the switching infrastructure at the following campuses:

**Zone 1** – **Thomas Hollister** managed the switch and UPS upgrade at McFee ES. **Thomas** walked around and verified with staff members that the conversion was a success. Campus staff comments were positive. They mentioned that everything was faster and seemed more stable.

**Zone 2** - **Tony Rogers** managed the switch upgrade at Holmsley ES. The campus conversion was successful but the only issue that resulted was a problem at Barker Transportation. The HP switch failed upon power cycle. **Tony** and **Thomas Hollister** installed and configured an available Catalyst 3750 to replace the failed switch.

**Zone 3** – **Elizabeth Montes** managed the switch upgrade at A. Robison ES. **Elizabeth** stated that the concerted effort between CFISD/Presidio/Gigabit worked flawlessly at A. Robison. However, there is a need to add an extra rack and patch panel for additional switches needed to support the future wireless upgrade.

**Zone 4** – **Anna Senties** managed the switch and UPS upgrade at Moore ES. **Anna** was able to complete the UPS and switch upgrade without any issues at Moore.
