

# Watkins Remodel Underway

**Tony Rogers** worked with Facilities and the construction crew on the MDF relocation at Watkins MS. It has been determined that the existing Cisco 3850 switches and existing Aruba access points will be re-deployed in the portable village once the portables arrive.

Layer 3 Communications previously removed all wireless access points due to construction. **Tony** noticed four access points remaining and online in the administrative offices. **Tony** requested Layer 3 to also remove these due to ceiling tiles being removed.
