DATE

Tuesday, April 11th

TIME

9:00 AM to 2:00 PM

On **Tuesday, April 11, 2017**, Aruba hosted their 2017 Spring Education Summit at the Berry Center. Pictured above is Jack Martin, Network Sales Director for Aruba HPE, sharing the opening remarks. Several area school districts, including CFISD, were in attendance along with a few higher educational institutions, including University of Houston and Texas A&M. **Frankie Jackson** opened the event with a presentation on how the CFISD Technology department is helping the curriculum department invent the classroom of the future.

Enterprise Communication Network Operational Support

Inventing the Future

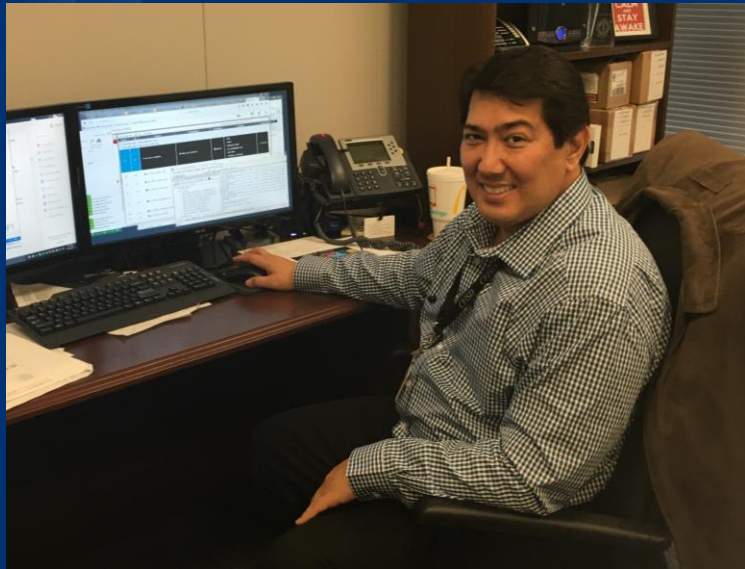

Inventing the Future for CFISD...

Andrew Tran, Tony Rogers, Ray Leung, Larry Barrios, Oscar Villar, Elizabeth Montes, Glen Carpenter, Anna Senties, Greg Rhodes, Jennifer Miller, Paula Ross and Frankie Jackson

Enterprise Communication Network Operational Support

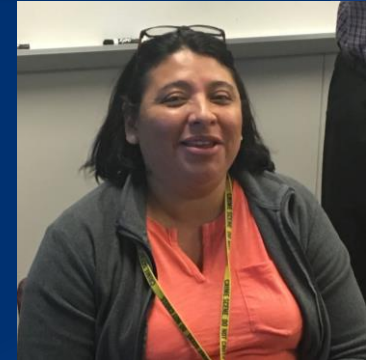

Oscar Villar worked with Joel McCotter from Layer 3 Communications to add the following networks to the Brocade fabrics at ISC and CyrusOne:

- 10.4.250.0
- 10.4.255.0
- 10.8.250.0
- 10.8.255.0

Elizabeth Montes

Anna Senties

Elizabeth Montes and **Anna Senties** are both supporting Juan Cruz by configuring the necessary ports for the Security Department on the following two projects:

- Texas Senate Bill 507 Camera Installation
- Exacq Security Camera Installation

Enterprise Communication Network Operational Support

Ray Leung received a call from Becky Cook regarding a student that was trying to take a foreign language class from one of the other high school but the software, Zoom, was not working consistently. The problem initially presented itself as a wireless issue. Therefore, **Glen Carpenter** went to the school and met Becky's staff, Steven Stone and Margaret Grice, to troubleshoot the issue. The problem ended up not being a wireless issue.

Glen Carpenter went to Andre ES to the portable(s) that claimed they had no WiFi connectivity. Turns out there was a loopback in the classroom next door. **Glen** removed the loop and wireless came back up.

Wireless Team discovered a problem with the newly installed Cat6A cabling that was recently completed at the campuses for wireless access points (APs). More research is needed before we completely resolve the issue, but the problem appears to be with the plastic surrounding the cables.
