Thousands left without power at approximately 6pm **Tuesday evening, August 23, 2016**, after a transformer caught fire in a power substation in the Cypress area. As of 8:55pm Tuesday night the list of campuses to the right were without power. **Oscar Villar** worked to generate a list of campuses that had lost network connectivity. He also noticed that the district lost internet connectivity. **Oscar** worked until 2:30am to ensure all connectivity was restored for the start of the 3rd day of classes.

Enterprise Communications Network Operational Highlights

Oscar Villar

Andrew Tran

Elizabeth Montes worked at CY Fair HS and located two loops in the IDF L closet. First loop, someone connected a network cable between two of the switches in the IDF L. The second loop, **Elizabeth** disabled the interface since she was not able to locate the network drop. She worked with the campus service techs to make them aware of this network drop. Once they find the drop and let **Elizabeth** know, then she will enable the interface.

Ray Leung

Also at CY Rair HS, **Ray Leung** and **Elizabeth** worked with the US History team for a couple of days since they were complaining about the wireless. The wireless is working fine now, however the computer doesn't connect automatically to CFISD_CP. In addition, some of the devices when they connect they said limited connectivity.

Roland Padilla

Charles Newton

Thomas Hollister worked on warranty repairs for 2 AP data drops in the gymnasium at Woodard ES. Contractor left patch cable off, resulting in AP's down first morning of school. **Ray Leung** and Thomas visited, patched and tested signal in gym, with success.

Enterprise Communication Network Team

Enterprise Communications Network Operational Highlights

Andrew Tran and **Lance Melancon** continue to work their way through application firewall issues as they arise.

Anna Senties and **Roland Padilla** worked to prepare for VOIP training at CyPark. **Anna** configured the Cisco switch needed for phone connectivity and Roland helped to setup the Cisco phones.

Enterprise Communications Network Operational Highlights

Tony Rogers continues to work with Watkins MS as they settle into their new portable village. The orchestra room at Watkins needs to have connectivity. Due to the MDF relocation, the cable runs for the orchestra room are out of specification. Thus, an additional IDF will need to be established for the year. In addition, Security cameras are needed to be configured on the network. Lastly, every day there is a call from Watkins due to the temp in the building.

This week there have been issues at Hamilton Elementary and MS with many phone lines out of service. Issues have been reported to ATT repair department.

Holbrook ES better understood the new Aruba wireless system after **Ray Leung** and **Anna Senties** explained the SSIDs.
