

# Enterprise Communications Network Operational Highlights

**Janette Martinez** continues to coordinate/schedule quadrant leaders to conduct final walk-throughs for campuses. Carl Simpson with Presidio walked the following campuses with **Elizabeth Montes**:

- Arnold MS
- Salyards MS
- Swenke ES
- Ault ES

It was during these walkthroughs that **Elizabeth** discovered a couple of surprises in the network closets. We must continue to remind the service technicians servicing campuses to help keep paraphernalia away from the network equipment.

# Enterprise Communications Network Operational Highlights

Adam ES is in the process of being renovated in a phased approach. Since there will be portions of the newly renovated campus back online in December 2016, and again in the Summer of 2017, **Elizabeth Montes** arranged a meeting between the Facilities Department and Layer3 Communications to discuss wireless access for the campus. With this proactive approach, both the Facilities Department and the Technology Department can plan a more efficient wireless deployment for Adam ES.

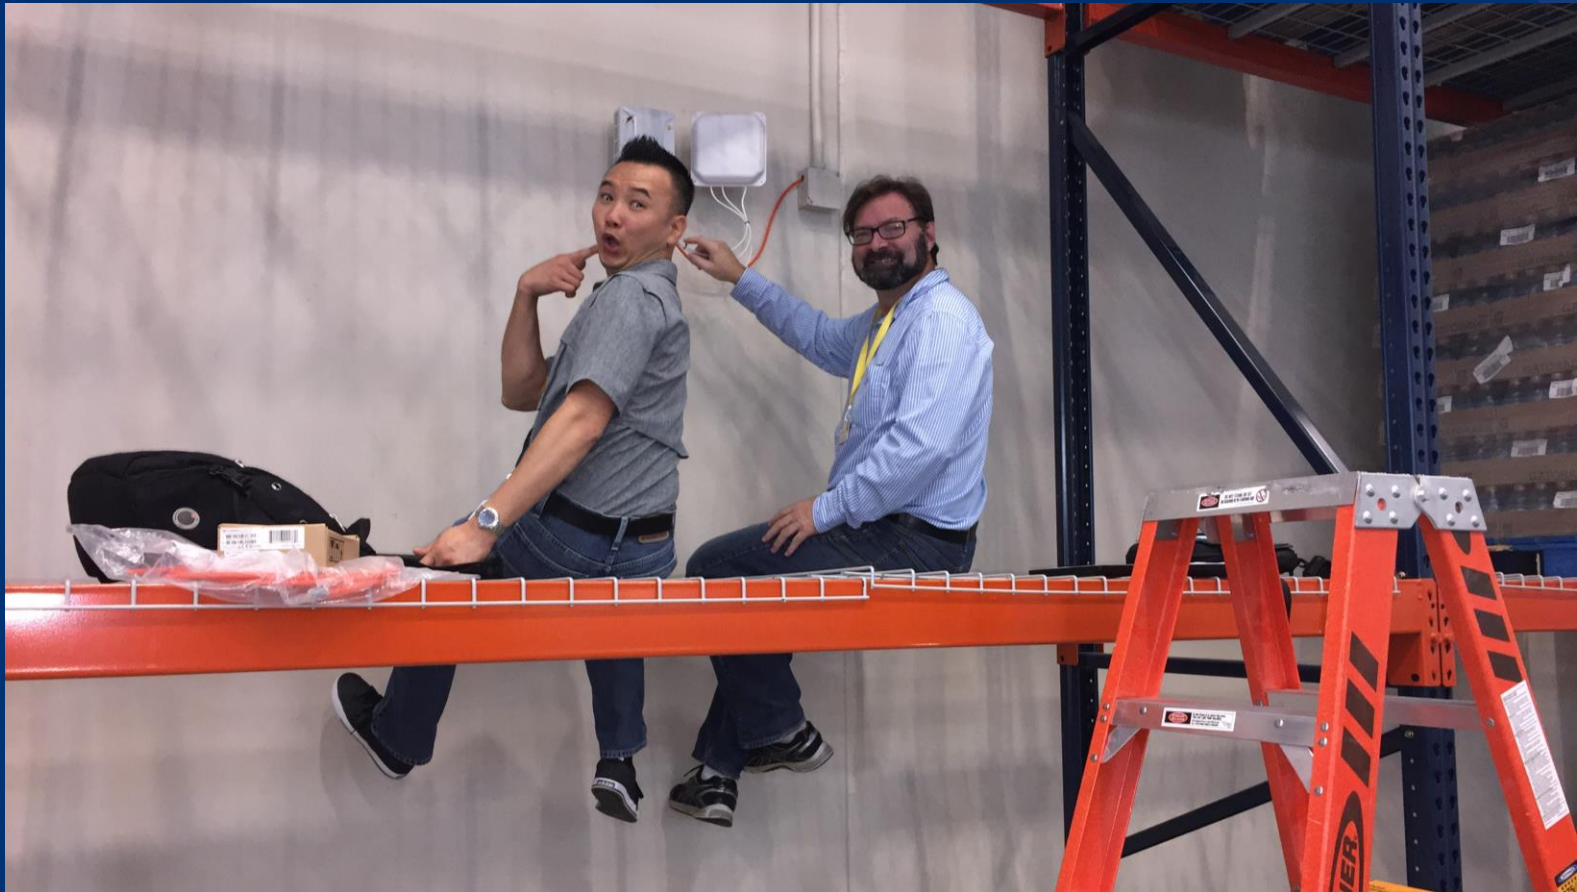

# Enterprise Communications Network Operational Highlights

In an attempt to provide effective communication to our campuses, Technology Services is teaming with the CFISD Video Production Department to create technology “how to” videos. On **Friday, October 7, 2016**, **Frankie Jackson**, **Paula Ross**, **Ray Leung**, and **Glen Carpenter** met with the video production team. The focus of the initial set of videos is to provide detailed instruction for our new wireless infrastructure.

# Enterprise Communications Network Operational Highlights

**Ray Leung** and **Glen Carpenter** were captured above working on a wireless access point issue in the Food Production Warehouse. The initial diagnosis is that the Aruba AP228 model is not broadcasting any SSIDs due to a potential power issue.
