

Paula Ross, Oscar Villar, and Derly Buentello Work Late into the Night to Assure Network Services are Available

The Morning of September 3, 2015

Value
Highlight

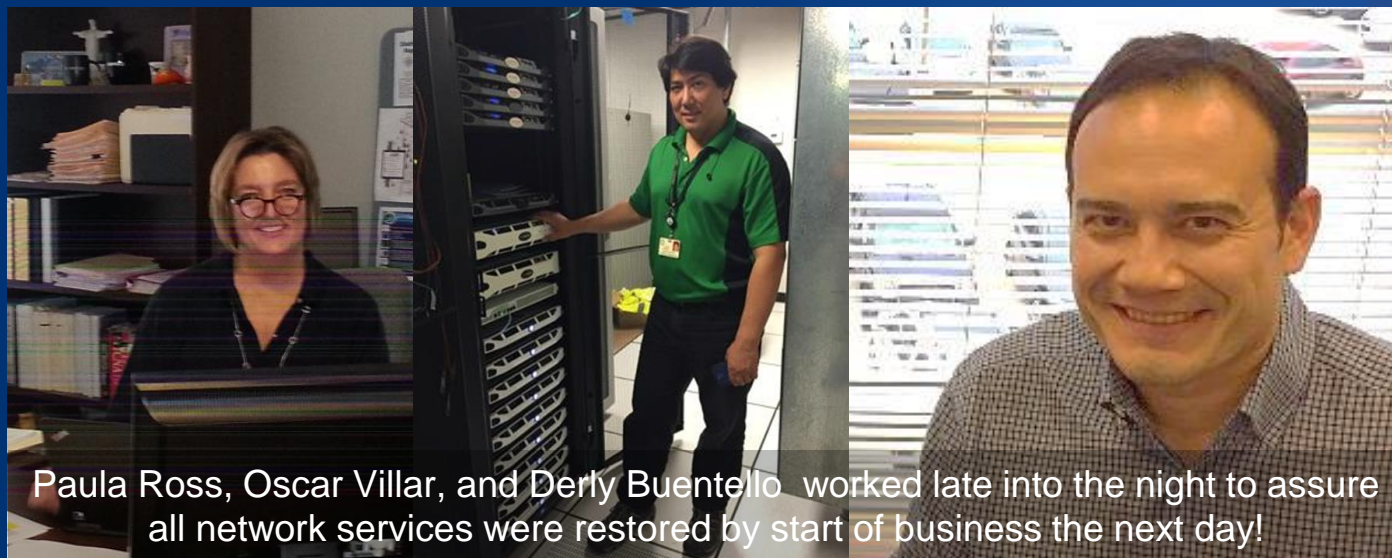

Starting at 5:00 p.m. on Wednesday, **September 2, 2015**, all network services were taken offline to install the infrastructure needed to support high speed wireless access infrastructure for dense wireless access deployment, from Data Center 3. With staff working from 5:00 p.m. to midnight, including Paula Ross, Oscar Villar, Derly Buentello – with our vendor partners – network services were back online the next morning and it was business as usual. Little does anyone know how hard they worked, how complex the task is, the coordination effort involved, and the criticality of any mistake made!

The great news is all network services were back online the next morning, without any campus or users experiencing any connectivity issues.

Our team is amazing!

Thank you for representing ALL of our organization's core values!

Paula Ross, Oscar Villar, and Derly Buentello worked late into the night to assure all network services were restored by start of business the next day!

Bond Goal 1: Install Enterprise High Speed Wireless Infrastructure
