

Windfern High School Upgrades for High-Speed Wireless Network With Dense Deployment Was a SUCCESS!

Staff from the Enterprise Communications Network (ECN) team, led by Paula Ross, including Derly Buentello from the Device Imaging and Integration (DII) team, with Layer3, upgraded Windfern high school with high-speed wireless access for dense deployment. Dense deployment refers to connecting full-coverage wireless access points. This will result in providing faster wireless connection and increase the wireless coverage throughout the school. The upgrade was a complete success and the great news is that they finished by 6:00 p.m.
