

Isilon for SB 507

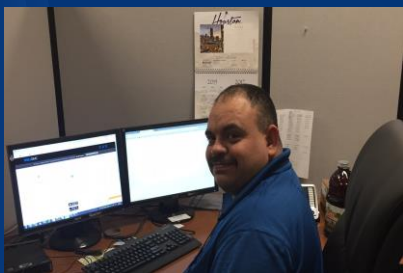

Lance Melancon, Ken Gibson, Greg Rhodes, and BJ Bodden of Presidio unbox and rack the new EMC Isilon storage as part of the District's fulfillment for Senate Bill 507. SB 507 relates to the placement and use of video cameras in self-contained classrooms or other settings providing special education services.

This dedicated storage is at Data Center 4 and is separate from the other district campus and administrative data. The new storage will provide a backup of the video captured by the campus cameras installed for SB 507. Configuration and implementation is being scheduled with Presidio.

Bridgeland High School

Mike Diaz has started the infrastructure build for data shares and permissions for the new high school, Bridgeland (the district's 12th high school). The process includes the creation of Active Directory groups, policies, and folders on the new Isilon storage.

Bridgeland High School, located at Mason Road and the Grand Parkway and scheduled for an August 2017 opening, is at four stories the tallest building CFISD has built to date.
