

SPLUNK

John Spencer

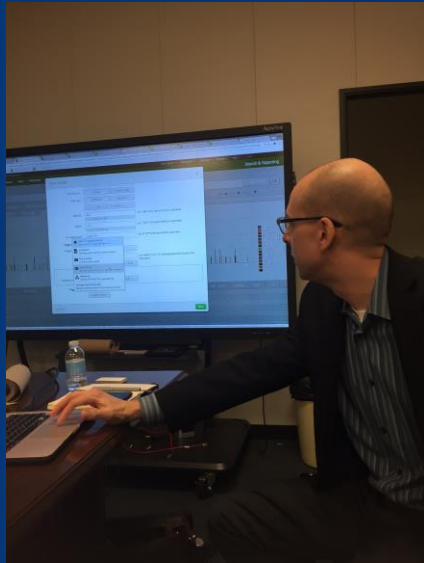

Bert Hayes

John Spencer and Bert Hayes from Splunk Inc. presented an overview of their product, Tuesday, January 10th.

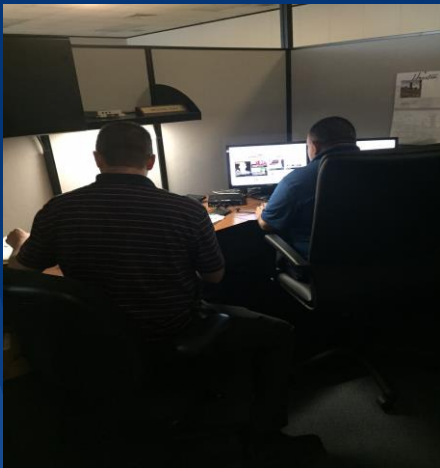

Splunk is a product that collects and indexes log and machine data from any source, adding functionality for reporting, monitoring, and analysis.

A specific case for us is reporting who deleted or modified files as captured in the Isilon audit logs.

Wells and Hoover Elementary

Mike Diaz and **Ken Gibson** created the data shares and permissions for Wells Elementary and Hoover Elementary.

Active Directory groups, policies and folder have been created with the campus shares residing on the new EMC file storage array.

Though the schools are not complete, we anticipate principals and other administration will be requesting their data shares soon.
