

# HPE Visit

Ken Flemming

Jessica Krause

Dave Kapavik

Ken Flemming

Greg Rhodes, Lance Melancon, and Ken Gibson met with Jessica Krause and Ken Flemming of HPE, along with Dave Kapavik and Paul Maney of Layer 3. The purpose of the meeting was to introduce Ken Flemming, a HPE pre-sales engineer, assigned to our account. Ken is a resource for HPE product introduction, direction, and support. In addition, we discussed having onsite HPE education classes for the blade chassis, OneView, and Interconnects.

# Upgrading EMS for the Berry Center

Nelda Hanzi continued to work on EMS with Mike Mallette from the Berry Center. The server and clients were upgraded last week but this week was devoted to upgrading the web server and EMS Mobile.

EMS is the software that Berry Center staff use to manage events. The Web Server was previously called Virtual EMS. This component displays venue information on monitors in the corridors at the Berry Center.

EMS Mobile is a new service in EMS. It provides access over wireless devices and will be beneficial for administrative staff.

# New Retain VM server

**Mike Diaz** worked with **Tay Kratzer** of Gwava to install and configure a new VMware Linux server for the Reload software.

The Reload software provides the capability to transfer email archive records from one database to another.

Currently our archive email is on the SAN that is being replaced. Gwava has been asked to provide a quote for moving the data. The server with Reload is a part of the fact gathering process for Gwava.

**Davin Cooke** with Gwava will be preparing the quote.
