

DEVICE IMAGING AND INTEGRATION

DII In Action – Upgrades and Patches

Austen Chang worked on several Ivanti and packaging projects.

First and foremost, he is working on an updated base image with Windows 10 build 1709. At this time, it still requires testing.

He also cleaned up patches in Ivanti and is in the process of preparing to deploy new patches.

In addition, he tested the Office 2016 Click to Run installation, which needs to be tested out with the new image.

This was all in addition to Austen's usual support of the CTE program.
