Student Network Access Every Day

As Cy Fair HS student enrollment increased, the campus administration had to get creative as to where to locate new classrooms. The administration decided to move a classroom to the campus agriculture center, but this location had no network connectivity. **Roland Padilla** assumed responsibility for the network request and displayed the necessary persistence required to complete the task. Due to distance requirements, **Roland** determine that fiber installation was warranted. Before fiber could be installed, **Roland** worked with the Maintenance Department to provide an underground conduit for the required fiber. Once the conduit was complete, **Roland** then worked with MCA Communications to install the fiber connectivity. Lastly, Roland coordinated the efforts of installing a new Hubble Box and new Cisco switch to ultimately provide the students with network access.

Thanks to **Roland** for verifying *Every Student Has Network Access Every Day!*
